

SafeCHECK puts you on a data-driven path to help drive a consistent safety awareness program.

Our SafeCHECK program makes the process of safety and productivity assessment user-friendly and app-based, enabling your personnel to ensure every piece of equipment is operating safely and at optimal efficiency.

Our program starts with a thorough onsite visual inspection and comprehensive site survey. Our exclusive SafeCHECK app provides the foundation for the collection of critical asset data and digital documentation of your facilities fixed assets such as loading docks and doors, vehicle restraints, HVLS fans and much more. Once your assets are documented you can easily track each variable via a personalized online portal we create for your facility. From this customized portal you can monitor safety concerns, warranty issues and specialized proactive maintenance needs. With the use of electronic evidence, data collection, and raising OSHA awareness, SafeCHECK is a must have resource for your facility management team.

With SafeCHECK, you can proactively and safely:

Raise safety & security standards for your company and your employees

Utilize data and electronic evidence to get real time conditions for your facility

Track warranty, OSHA requirements & proactive maintenance plans

Support budgeting efforts while reducing total cost of ownership

What you can expect with SafeCHECK:

STEP 1:

Safety & Productivity Assessment

- Onsite physical inspection with facility survey and comprehensive documentation of current operating conditions
- Collection of critical asset data via SafeCHECK app
- Analysis and identification of safety concerns

STEP 2:

Review Results & Recommend Solution

- Make data-driven decisions based on electronic evidence gathered during the facility survey
- Develop and document a plan of action to ensure facility is operating safely and efficiently, to improve uptime and TCO

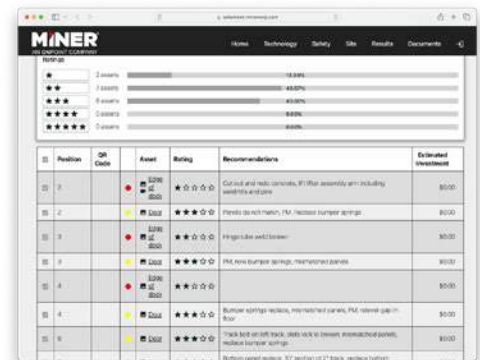

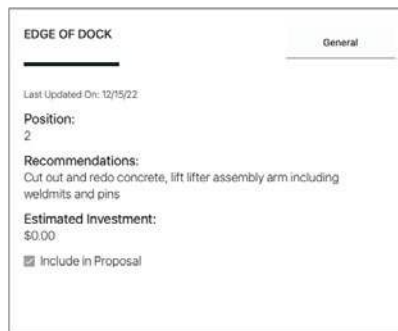

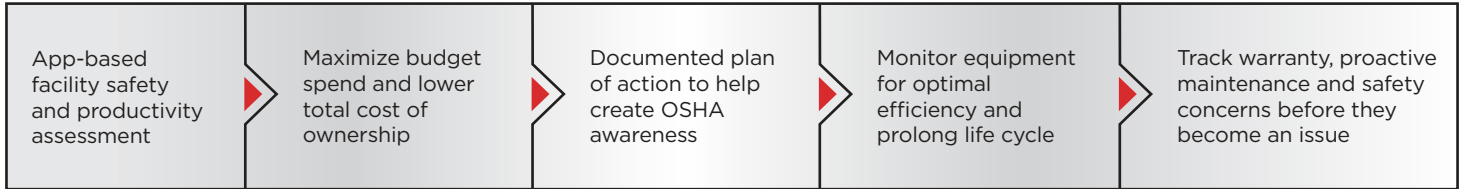

STEP 3:

Perform Service & Repairs

- MINER service technician completes required repairs, updates and/or installations
- Monitor plan to ensure productivity, product life cycle optimization and OSHA compliance

How it **WORKS**

MINER's patented SafeCHECK application and approach to capture important data about the fixed assets within a facility is best in class. Our team has extensive industry expertise and experience in properly surveying facilities of all sizes. All assets are rated on a scale of 1 to 5, photos are taken for electronic evidence and everything is documented via a personalized, dedicated online portal for each customer. The online portal gives customers an opportunity to make data driven decisions that will help maximize ROI, ensure safety standards are met, and drive optimal operational efficiency and uptime.
